

13. bloggerapp

Objectives

- Explain various ways of conditional rendering
- Explain how to render multiple components
- Define list component
- Explain about keys in React applications
- Explain how to extract components with keys
- Explain React Map, map() function

In this hands-on lab, you will learn how to:

- Implement conditional rendering in React applications

Prerequisites

The following is required to complete this hands-on lab:

- Node.js
- NPM
- Visual Studio Code

Notes

Estimated time to complete this lab: 60 minutes.

Create a React App named “bloggerapp” in with 3 components.

- 1. Book Details**
- 2. Blog Details**
- 3. Course Details**

Implement this with as many ways possible of Conditional Rendering.

CODE:

App.js

```
import React from 'react';  
  
import CourseDetails from './components/CourseDetails';  
  
import BookDetails from './components/BookDetails';  
  
import BlogDetails from './components/BlogDetails';  
  
import './App.css';
```

```
function App() {  
  return (  
    <div className="container">  
      <CourseDetails />  
      <BookDetails />  
      <BlogDetails />
```

```
</div>

);

}
```

```
export default App;
```

App.css

```
.container {
  display: flex;
  justify-content: space-around;
  margin: 30px;
  font-family: Arial, sans-serif;
}
```

```
.section {
  width: 30%;
  border-left: 5px solid green;
  padding-left: 15px;
}
```

```
h2 {
  font-weight: bold;
  margin-bottom: 10px;
}
```

```
h3 {  
  margin: 5px 0;  
}
```

```
p, strong {  
  margin: 2px 0;  
}
```

CourseDeatils.js

```
import React from 'react';
```

```
const courses = [  
  { name: 'Angular', date: '4/5/2021' },  
  { name: 'React', date: '6/3/20201' } // Typo from your image kept as is  
];
```

```
function CourseDetails() {  
  return (  
    <div className="section">  
      <h2>Course Details</h2>  
      {courses.map((course, index) => (  
        <div key={index}>  
          <h3>{course.name}</h3>  
          <p>{course.date}</p>  
        </div>
```

```
    )})  
  </div>  
);  
}
```

```
export default CourseDetails;
```

BookDetails.js

```
import React from 'react';  
  
const books = [  
  { title: 'Master React', price: 670 },  
  { title: 'Deep Dive into Angular 11', price: 800 },  
  { title: 'Mongo Essentials', price: 450 }  
];  
  
function BookDetails() {  
  return (  
    <div className="section">  
      <h2>Book Details</h2>  
      {books.map((book, index) => (  
        <div key={index}>  
          <h3>{book.title}</h3>  
          <p>{book.price}</p>  
        </div>  
      )}
```

```
    )})  
  </div>  
);  
}
```

```
export default BookDetails;
```

BlogDetails.js

```
import React from 'react';  
  
const blogs = [  
  {  
    title: 'React Learning',  
    author: 'Stephen Biz',  
    content: 'Welcome to learning React!',  
  },  
  {  
    title: 'Installation',  
    author: 'Schewzdenier',  
    content: 'You can install React from npm.'  
  }  
];  
  
function BlogDetails() {  
  return (  

```

```

<div className="section">

  <h2>Blog Details</h2>

  {blogs.map((blog, index) => (

    <div key={index}>

      <h3>{blog.title}</h3>

      <strong>{blog.author}</strong>

      <p>{blog.content}</p>

    </div>

  ))}

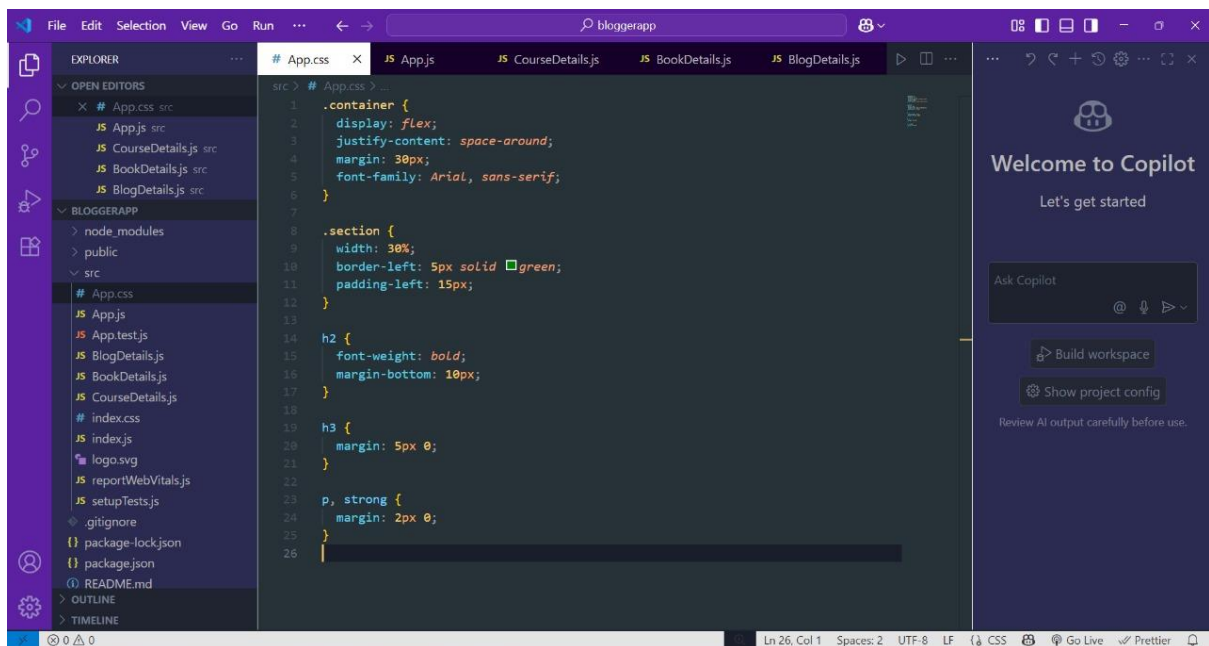

</div>

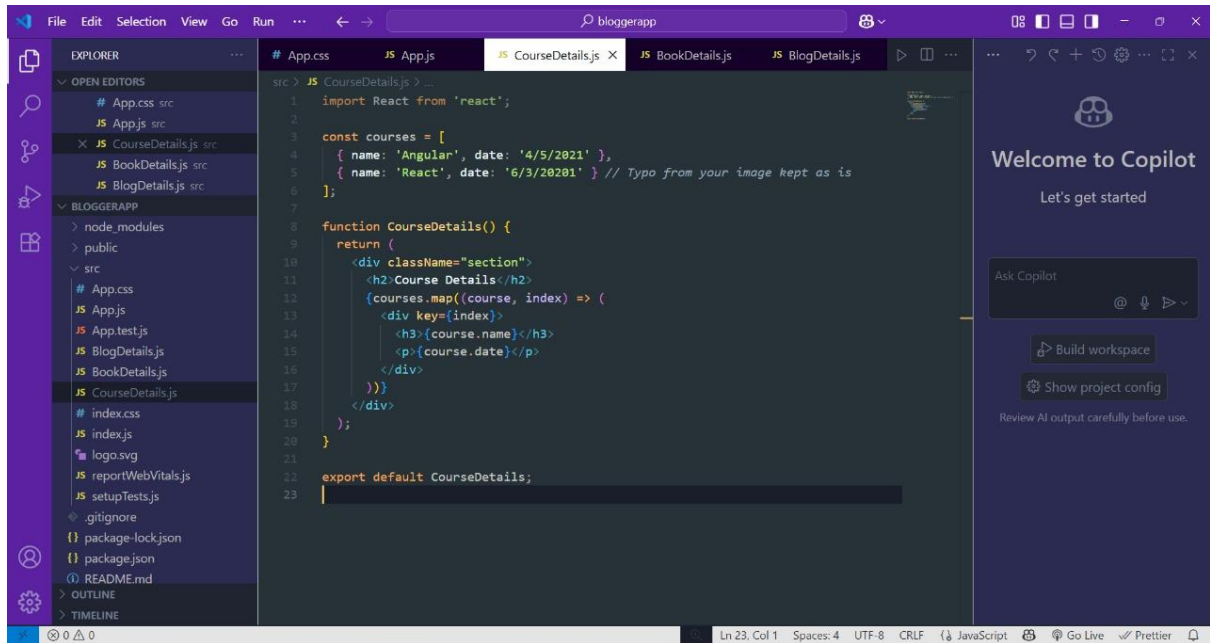

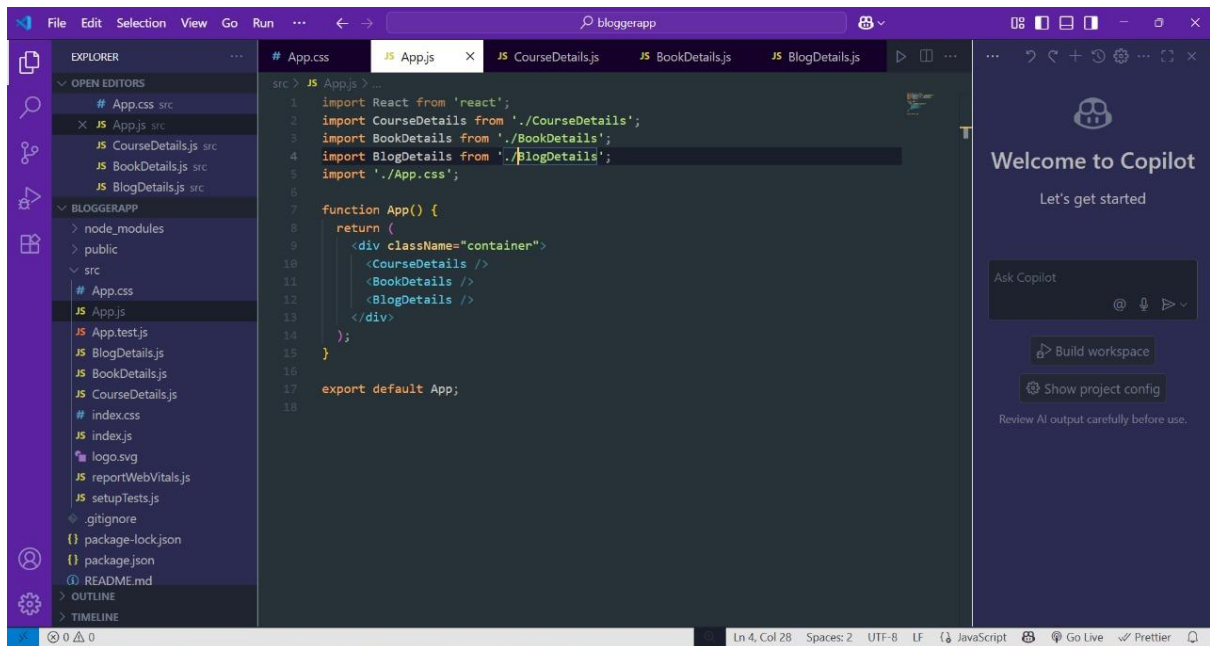

);

}

```

export default BlogDetails;

```
src > JS BookDetails.js > ...
1  import React from 'react';
2
3  const books = [
4    { title: 'Master React', price: 670 },
5    { title: 'Deep Dive into Angular 11', price: 880 },
6    { title: 'Mongo Essentials', price: 450 }
7  ];
8
9  function BookDetails() {
10   return (
11     <div className="section">
12       <h2>Book Details</h2>
13       {books.map((book, index) => (
14         <div key={index}>
15           <h3>{book.title}</h3>
16           <p>{book.price}</p>
17         </div>
18       ))}
19     </div>
20   );
21 }
22
23 export default BookDetails;
24
```

```
src > JS BlogDetails.js > ...
1  import React from 'react';
2
3  const blogs = [
4    {
5      title: 'React Learning',
6      author: 'Stephen Biz',
7      content: 'Welcome to learning React!'
8    },
9    {
10     title: 'Installation',
11     author: 'Schewzdenier',
12     content: 'You can install React from npm.'
13   }
14 ];
15
16 function BlogDetails() {
17   return (
18     <div className="section">
19       <h2>Blog Details</h2>
20       {blogs.map((blog, index) => (
21         <div key={index}>
22           <h3>{blog.title}</h3>
23           <strong>{blog.author}</strong>
24           <p>{blog.content}</p>
25         </div>
26       ))}
27     </div>
28   );
29 }
30
```

```
